

# Embed a video

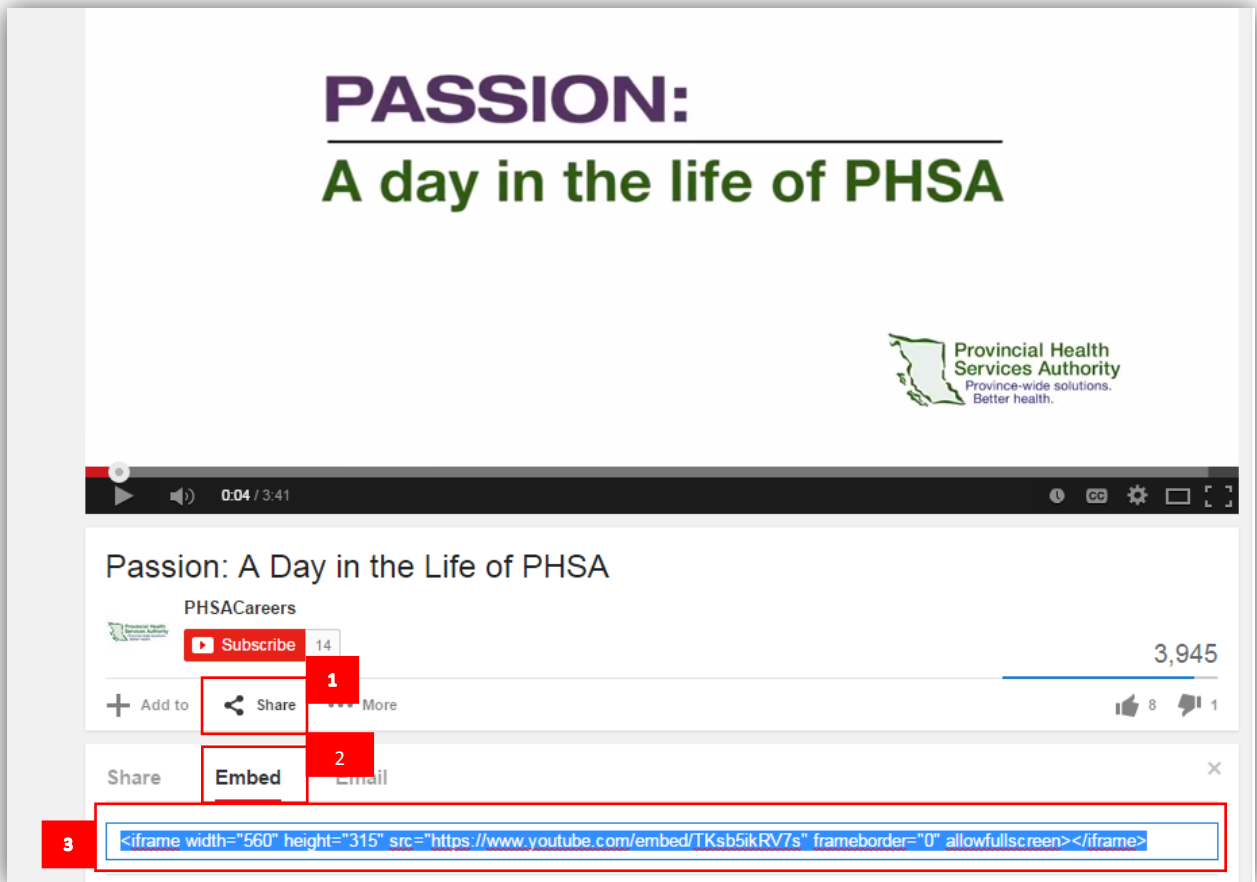

To add a video to your page it must be hosted on a media site (for example YouTube or the PHSA Media Server). You can follow these steps to embed the video on your page.

The steps explained here are for embedding a video from YouTube. Other video websites/servers may behave differently but will give you instructions where the find the Embed code.

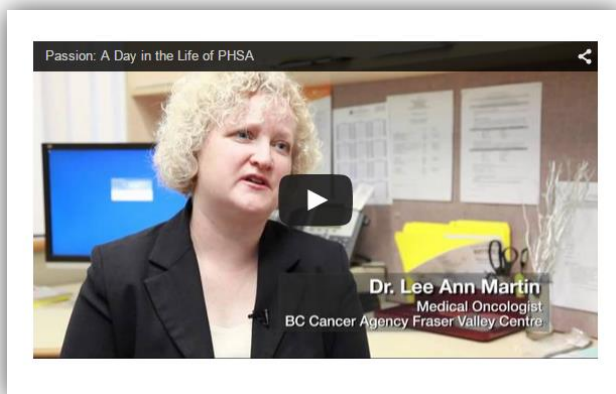

1. On YouTube, find the video that you want to play on your page and select it. The video will open in a new window.

2. Select Share to bring up the options, select Embed, and copy the code that is displayed in the Embed field.

3. Navigate to your page and put your cursor in the page content area.
4. Paste the code into the content area. Your page now has the video embedded on it.

**NOTE:** Note that embedded videos do not work in tabs. If you are using a page template that has tabs (basic plus, clinic), link to your video rather than embedding it.
